Sexual and Reproductive Health, Rights, Justice, Pleasure, and HIV

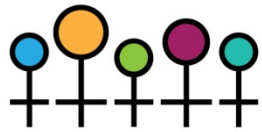

Last updated: February 17, 2025

Together, we can change the course of the HIV epidemic...one woman at a time.

thewellproject

Introduction

Sexual/reproductive healthcare separate from HIV care

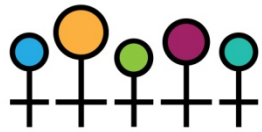

— Impact of racism, sexism, poverty, violence on wellbeing

- **Reproductive health:** Care and services needed?
- **Reproductive rights:** Laws needed for that care?
- **Reproductive justice:** Change needed for all people to live their best and freest possible lives

Related concepts:

- Policy change based on rights
- Care from reproductive health care professionals

Justice: Power for change in the hands of affected people

thewellproject

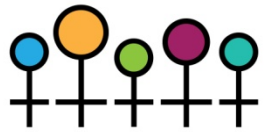

What Is Reproductive Justice?

Human right to:

- maintain personal *bodily autonomy*
- have children, or not have children
 - *fertility decision making*
- live and parent children in safe communities
 - *social justice*

Human rights principle:

- Basic dignity for every human simply because they are alive
 - *Not based on citizenship, social identities, circumstances*

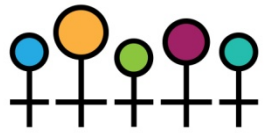

thewellproject

What Are Sexual & Reproductive Health & Rights?

Includes **entire lifespan**, not just time when someone may be able to become pregnant

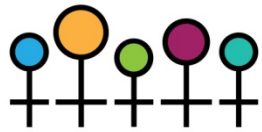

- Sexual and reproductive **health**:
care, services, education
- Sexual and reproductive **rights**:
practical ability to access these services

thewellproject

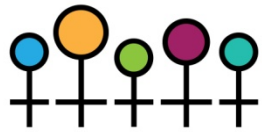

Sexual and Reproductive Health

- Sexual health:
 - Comprehensive education
 - Prevention of gender-based violence
 - HIV and STI prevention
 - Psychosexual counseling
- Reproductive health:
 - Perinatal care
 - Contraception
 - Fertility care
 - Safe abortion care

HIV-related sexual and reproductive healthcare:

- HIV-related stigma
 - Lack of provider training
 - Provider views bias who is offered HIV testing, prevention counseling, etc.
- Other aspects of person's experience impact care needed:
 - Race/ethnicity
 - Gender identity and expression
 - Parental/caregiving responsibilities
 - Socioeconomic situation
 - Experience of violence/trauma

thewellproject

Sexual and Reproductive Rights

Not just abortion rights

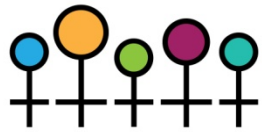

Right to:

- Enjoy sexual health
- Fulfill and express one's sexuality
- Decide whether or not to have children

Freedom from discrimination when exercising these rights

HIV criminalization laws = *reproductive oppression*

- U = U
- Very low chance of vertical HIV transmission when on treatment

thewellproject

HIV Care

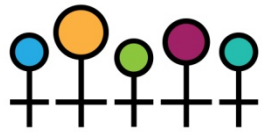

HIV separate from other aspects of (women's) health:

- Useful in past to get funding

But:

- Stigmatizing
- Doesn't serve women across gender spectrum

Need to integrate sexual and reproductive health care
with HIV care and prevention!

thewellproject

Racism and Reproductive Justice

Reproductive justice:

Term coined in 1994 after meeting of Black women activists in US South

Reproductive justice and HIV:

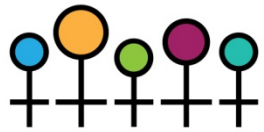

- HIV rates highest among people who are already marginalized and stigmatized
 - Result of generations of unequal treatment

History:

- Medical experimentation on Black women
 - E.g., gynecological surgery on enslaved women

Now:

- Belief that Black people feel less pain
- Black maternal and infant mortality rates
 - E.g., Serena Williams giving birth in 2017
- Systemic racism

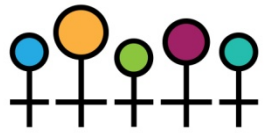

thewellproject

Sex, Pleasure, Freedom, and HIV

All women living with HIV across the gender spectrum deserve to have full, satisfying sexual lives.

Pleasure rarely discussed in HIV context

- Fear of transmitting the virus may block pleasure
- Providers need to overcome their own biases
 - Need to provide sex-positive information on HIV, U=U, PrEP
- Women's *wellbeing* main indicator of HIV care success

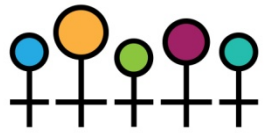

thewellproject

Sex, Pleasure, Freedom, and HIV

Also needed:

- Research into sexual pleasure in women living with HIV
- More attention to needs of historically underserved women
 - Black, indigenous, other people of color
 - Gender/sexually diverse
 - Engaged in sex work
 - Using drugs
- Sexual health education centering pleasure
- Comprehensive sex education in schools
- Sex positivity across entire society

thewellproject

Language Matters

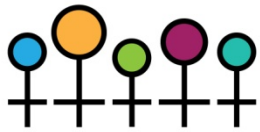

“Risk”:

- Focuses on individual behavior, not social realities

Replace with language that acknowledges:

- Desire
- Relevance
- Reasons
- Strength

*How do **you** want to see HIV talked about outside of the risk "box"?*

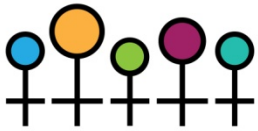

thewellproject

Take Action!

Join Well Project's and others' effort to secure sexual and reproductive justice for everyone:

- Shift the research agenda
- Promote a culture of wellness
- Keep uplifting U=U
- Follow our partners
