WRI 2019 - Women Living with HIV over the Long Term and Across the Lifespan

Submitted on Aug 19, 2019

Image

The Women's Research Initiative on HIV/AIDS (WRI) conducted its annual meeting May 2-5, 2019. The WRI 2019 meeting, *Women Living with HIV over the Long Term and Across the Lifespan*, broadly addressed issues related to long-term experiences with HIV across the lifespan, including those relevant to older women who are aging with HIV and younger women who acquired HIV perinatally or as young children and have now been living with HIV for decades.

The WRI 2019 featured a variety of presentations by experts, which reviewed the most recent science

on sex differences related to long-term survival with HIV, investigated what is known and unknown about the psychosocial and structural factors influencing the experiences of women over the long term, discussed the role of resilience in long-term survival with HIV, and investigated quality-of-life indicators for women living with HIV over the long term. The meeting focused on the importance of addressing women's lived experiences across all levels of research, policy, and programming. As with all WRI meetings, WRI 2019 also focused on identifying actions that individual WRI members can take to address gaps in research and care related to the long-term health and well-being of women living with HIV.

In the context of current policy initiatives to "end the HIV epidemic," focusing on women who have been living with HIV over the long term makes it clear that viral suppression—the endpoint highlighted in these initiatives—is only one important metric of success. Moreover, viral suppression will not be sustained unless other medical, psychological, and social issues affecting the lives of women are addressed. If we hope to truly change the course of the HIV epidemic, it is imperative to attend to the full range of women's lived experiences at all levels of research, policy, and programming.

The WRI identified a number of research, policy, and advocacy gaps that need to be addressed (please see the <u>WRI 2019 issue brief</u>). The WRI is committed to working collectively with all relevant stakeholders, including WRI members to advance these efforts.

2019 WRI meeting participants

Erika Aaron, MSN

Philadelphia Department of Health Ada Adimora, MD*

UNC School of Medicine Alison Agwu, MD, ScM

Johns Hopkins Judith D. Auerbach, PhD*

University of California San Francisco Dawn Averitt*

Women's Research Initiative on HIV/AIDS John Brooks, MD

Centers for Disease Control Gina Brown, MSW

Southern AIDS Coalition Jennifer Bushen, PharmD

Janssen Scientific Affairs Cecilia Chung

Transgender Law Center Jenna Conley*

Women's Research Initiative on HIV/AIDS Elizabeth Connick, MD

University of Arizona Judith Currier, MD, MSc

UCLA, David Geffen School of Medicine Antigone Dempsey

HRSA/HAB Rebecca Denison Dazon Dixon Diallo, DHL, MPH

SisterLove, Inc. Karine Dube, DrPh

UNC Gillings School of Global Public Health Lisa Fitzpatrick, MD, MPH, MPA

Promoting Practical Health, Inc. Jennifer Kates, PhD*

Kaiser Family Foundation Naina Khanna

PWN-USA Michelle Lopez

ACRIA Raven Lopez

Caribbean Women's Health Association Edward Machtinger, MD

University of California San Francisco Krista Martel*

The Well Project Tonia Poteat, PhD, PA-C

University of North Carolina Linda H. Scruggs, MHS

Ribbon Consulting Group Kathleen Squires, MD

Merck & Co Inc. L'Orangelis Thomas Negron Phyllis Tien, MD

University of California San Francisco Vani Vannappagari, PhD, MPH, MBBS

ViiV Healthcare Fulvia Veronese, PhD*

DAIDS, NIAID, NIH Celeste Watkins-Hayes, PhD

Northwestern University Shannon Weber, MSW

UCSF/HIVE, Please PrEPMe.org Andrea Weddle, MSW

HIV Medicine Association Charles Wira, PhD

Geisel School of Medicine at Dartmouth Julie Womack, PhD

Yale School of Nursing
